Combidyn

Pressure tubing for the measurement of physiological pressure

- \varnothing 1.5 x 2.7 mm
- undamped and accurate pressure monitoring
- pressure stability tested up to 8 bar
- transparent for visual control
- tubing of various lengths
- dead space approx. 1.2 ml/m
- tube length matches practical requirements
- colour-coding:
 - red stripes (arterial)
 - blue stripes (venous)
 - yellow stripes (pulmonal arterial)

• luer-fittings

- with special screw thread
- male/female
- ABS

Combidyn

Pressure tubing for the measurement of physiological pressure and intravenous medications

Combidyn Polyethylene

- transparent Polyethylene
- especially useful for infusion of drugs with PVC-incompatibility
- pressure stability tested up to 8 bar
- transparent for visual control
- minimized dead space
- easy handling due to flexible material
- optimal for paediatric and neonatal pressure measurement
- tubing diameter \varnothing 1.0 x 2.0 mm
- dead space approx. 0.8 ml/m
