

FLYMAX DERM

PROTECTIVE SKIN LOTION

■ Description

In the summer season, some horses experience recurrent skin reactions at the base of the tail or around the mane, generally caused by bites from small flies known as midges.

■ Purpose

FLYMAX DERM has been formulated by AUDEVARD Laboratories for horses with skin sensitivity caused by insect bites during the summer.

■ Formula

Its unique formula combines five concentrated essential oils, plus plantain and aloe vera extracts. Its balm format and precision nozzle enable clean and precise application.

■ Our advice

Biting midges are more active at the end of the day, so advise your customers to apply the treatment at this time.

■ Directions for use

Apply once or twice a day to affected areas.

Midges are more active in the evening so the recommended time to apply Flymax Derm is late afternoon.

■ Professional format

500 ml applicator bottle - (EAN 3401195011173).

Composition per litre

Water, benzyl benzoate, Aloe vera, lavandin (essential oil), allantoin, geranium (essential oil), linalool, calendula (essential oil), eucalyptus (essential oil), dried plantain extract.
